DETAILED ACTION

1. This is in response to Applicant's arguments filed 30 March 2005, with respect to claims 1, 2, 4-11, 13-20 and 22-39 have been fully considered and are persuasive. Therefore, the rejection of last Office action has been withdrawn.

2. Claims 1, 2, 4-11, 13-20 and 22-39 remain pending for examination.

REASONS FOR ALLOWANCE

3. With respect to claims 1, 2, 4-11, 13-20 and 22-39 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

With respect to claims 1, 2, 10, 11, 28, 29, 32 and 33, the claimed features "a method for parallelizing a computer application program based on a script of a script-driven software tool, comprising automatically analyzing the script and producing a parallel computation specification based on such analysis, where such parallel computation specification provides functional equivalence to the script when executed by a parallel runtime system, by parsing script into statements comprising at least processing steps and dataset definitions" in conjunction with other elements of the independent claims would not found anticipated or obvious over the prior art made of record. With respect to claims 19, 20, 36 and 37, the claimed features "a system for parallelizing a computer application program based on a script of a script-driven software tool, and for automatically analyzing the script and producing a parallel

computation specification based on such analysis, where such parallel computation specification provides functional equivalence to the script when executed by a parallel runtime system, including means for parsing script into statements comprising at least processing steps and dataset definitions” in conjunction with other elements of the independent claims would not found anticipated or obvious over the prior art made of record. With respect to claims 30, 31, 34, 35, 38 and 39, the claimed features “a method for parallelizing a computer application program based on a script of a script-driven software tool, comprising automatically analyzing the script and producing a parallel computation specification based on such analysis, where such parallel computation specification provides functional equivalence to the script when executed by a parallel runtime system, by parsing script into statements; constructing a dataset access table based on the serial dataset access table; and determining, for each processing step identified in the parallel processing step table, if a corresponding pre-defined parallelization rewrite rule exists for such processing step, and if so, then applying the corresponding pre-defined parallelization rewrite rule to redefine associated entries in the parallel dataset table, the parallel processing step table, and the dataset access table as parallel processing entries” in conjunction with other elements of the independent claims would not found anticipated or obvious over the prior art made of record.

The dependent claims, being definite, further limiting, and fully enabled by the specification are also allowed.

The closest prior art, Ruf, U.S. Patent Number 6,077,313 relates to the field of dataflow analyses for computer programs. Bodin et al., A user level program transformation tool but fail to teach the above limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
